

The CFHTLS-TERAPIX Extragalactic database

Jean-Christophe Malapert

SF2A 18 juin 2004

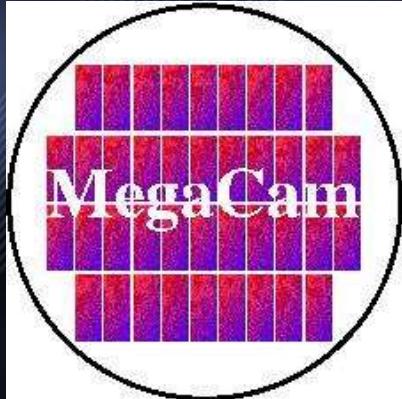

Catalogues

Catalogue of 777 stars

Tycho Brahe (1546-1601)

300000 galaxies per 1x1
(mag 25)

Astrophysical research would be impossible without databases!

What should a database provide?

- Database query interface

 **TERAPIX** Qualityfits Processed data 

Home > Tools > Data reduction > Spica

- Server Admin Spica -
- Quality assessment 1.10 -

| Images processed | 2711 |
|------------------------|------|
| Images invalid | 1 |
| Search images | 2711 |
| Maximum images display | 10 |

| RunId | | |
|--------|--------|------|
| Name | Number | % |
| 03AL01 | 407 | 15 % |
| 03AL02 | 78 | 2 % |
| 03AL03 | 371 | 13 % |

| Grade | | |
|------------|--------|------|
| Value | Number | % |
| Not graded | 1 | 0 % |
| A | 1548 | 57 % |
| B | 1134 | 41 % |
| C | 28 | 1 % |

Quality Assessment summary table of input data derived from the Terapix quality assessment tool "QualityFITS". These data are provided for ALL CFHTLS-related images that enter into the Terapix processing.

This front panel can be used to select images according to your preferences

| Search | Display | QF Version | Filename | Object / Field | RunId | Filter | Node | Grade (*) |
|--------|-----------------|-----------------|----------|----------------|-------------|------------|-----------|-------------|
| 10 | 1.10 | | | Object / Field | ... | ... | ... | ... |
| Go | RA Min & Max | Dec Min & Max | | Master flat | Master mask | Exp_time | Airmass | Mseeing |
| | 0 h 00 m 12.75 | -23 ° 54' 55.8" | | --- | --- | Min 1.02 | Min 1 | Min 0.5608 |
| | 23 h 59 m 50.13 | 57 ° 46' 30.9" | | | | Max 860.08 | Max 2.912 | Max -3.5399 |
| | | | | | | | | Max 4.3188 |
| | | | | | | | | Max 23.0301 |

(*) Comments are from Terapix visual control. Grades are Terapix visual image quality control and ranking using the following level :
A = Good,
B = acceptable (see comment),
C = serious problem. Rejected for further processing steps (see comment)

All 10 images displayed. Use the form to select more or less [Export the whole result in CSV (ASCII file in Comma Separated Values)]

- Rapid access to data < 1s for 4500 images in database
- Ability to perform simple statistical calculations on the fly

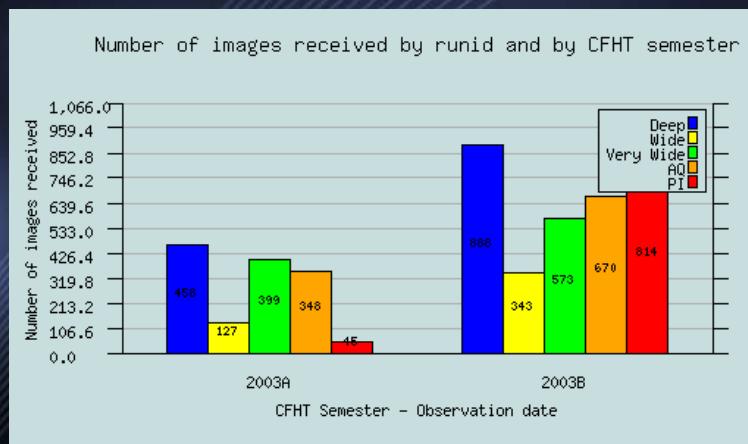

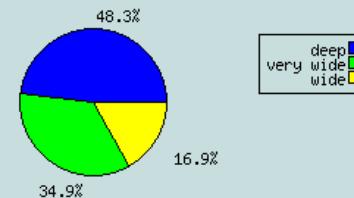

| RunId | | |
|--------|--------|------|
| Name | Number | % |
| 03AL01 | 407 | 15 % |

CFHTLS images pie diagram (Total : 2788 images)

CFHTLS total int time pie diagram (Total : 234.0 hours)

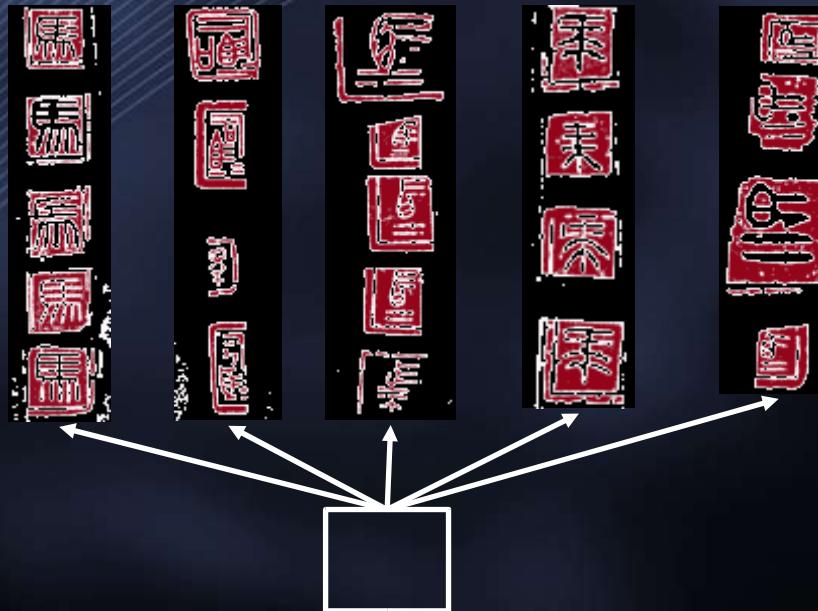

- Ability to accommodate all data from different surveys
- Multiple output formats (ASCII, XML, binary, ...)

Databases must be interoperable

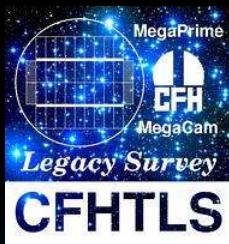

Astrophysicists in different fields are familiar with different databases, use different analysis tools.....

Need survey interface that can span multiwavelength data

We need to find a common language between these databases!

The aim of the proposed Virtual Observatory is to integrate all astrophysical databases.

TERAPIX Database : DBTERAPIX

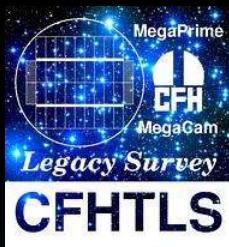

A MySQL relational database

What does it do ?

- Storage of catalogues and metadata
- Processing history
- Dynamic design

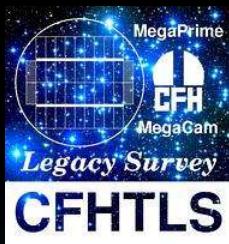

Why MySQL ?

- Open source
- Free

Application : Skywatcher

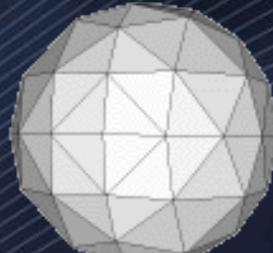

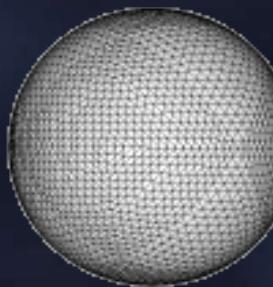

XML file and database of Skywatcher

Includes :

- Filename
- Object
- Runid
- Filter
- WCS coordinates
- HTM (cutting sky)

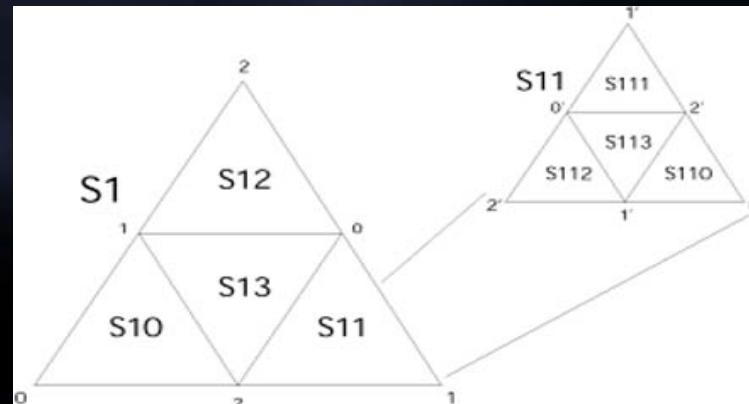

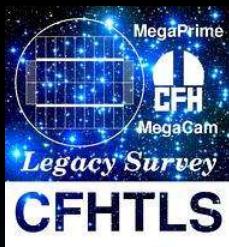

Level 3

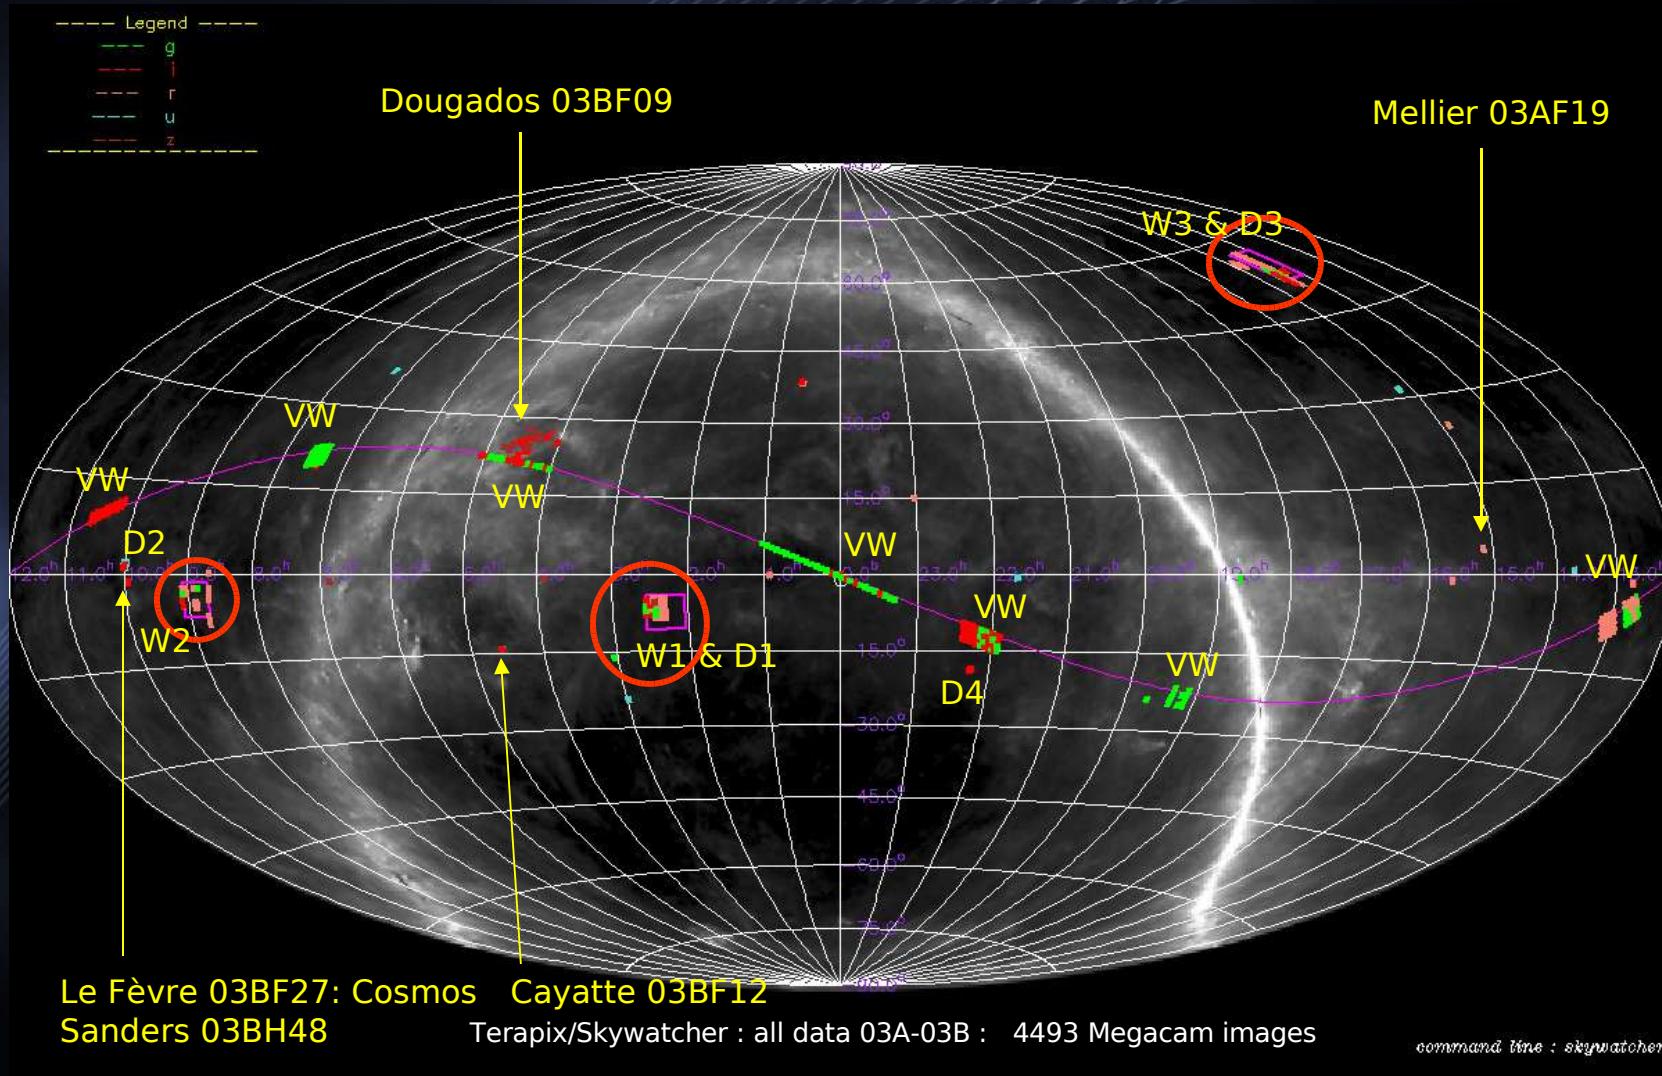

Level 5

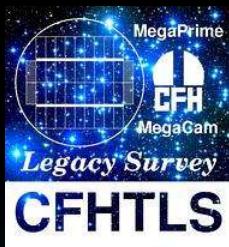

| HTM level | Nb of triangles |
|-----------|-----------------|
| 0 | 8 |
| 1 | 32 |
| 2 | 128 |
| 3 | 512 |
| 4 | 2048 |
| 5 | 8192 |

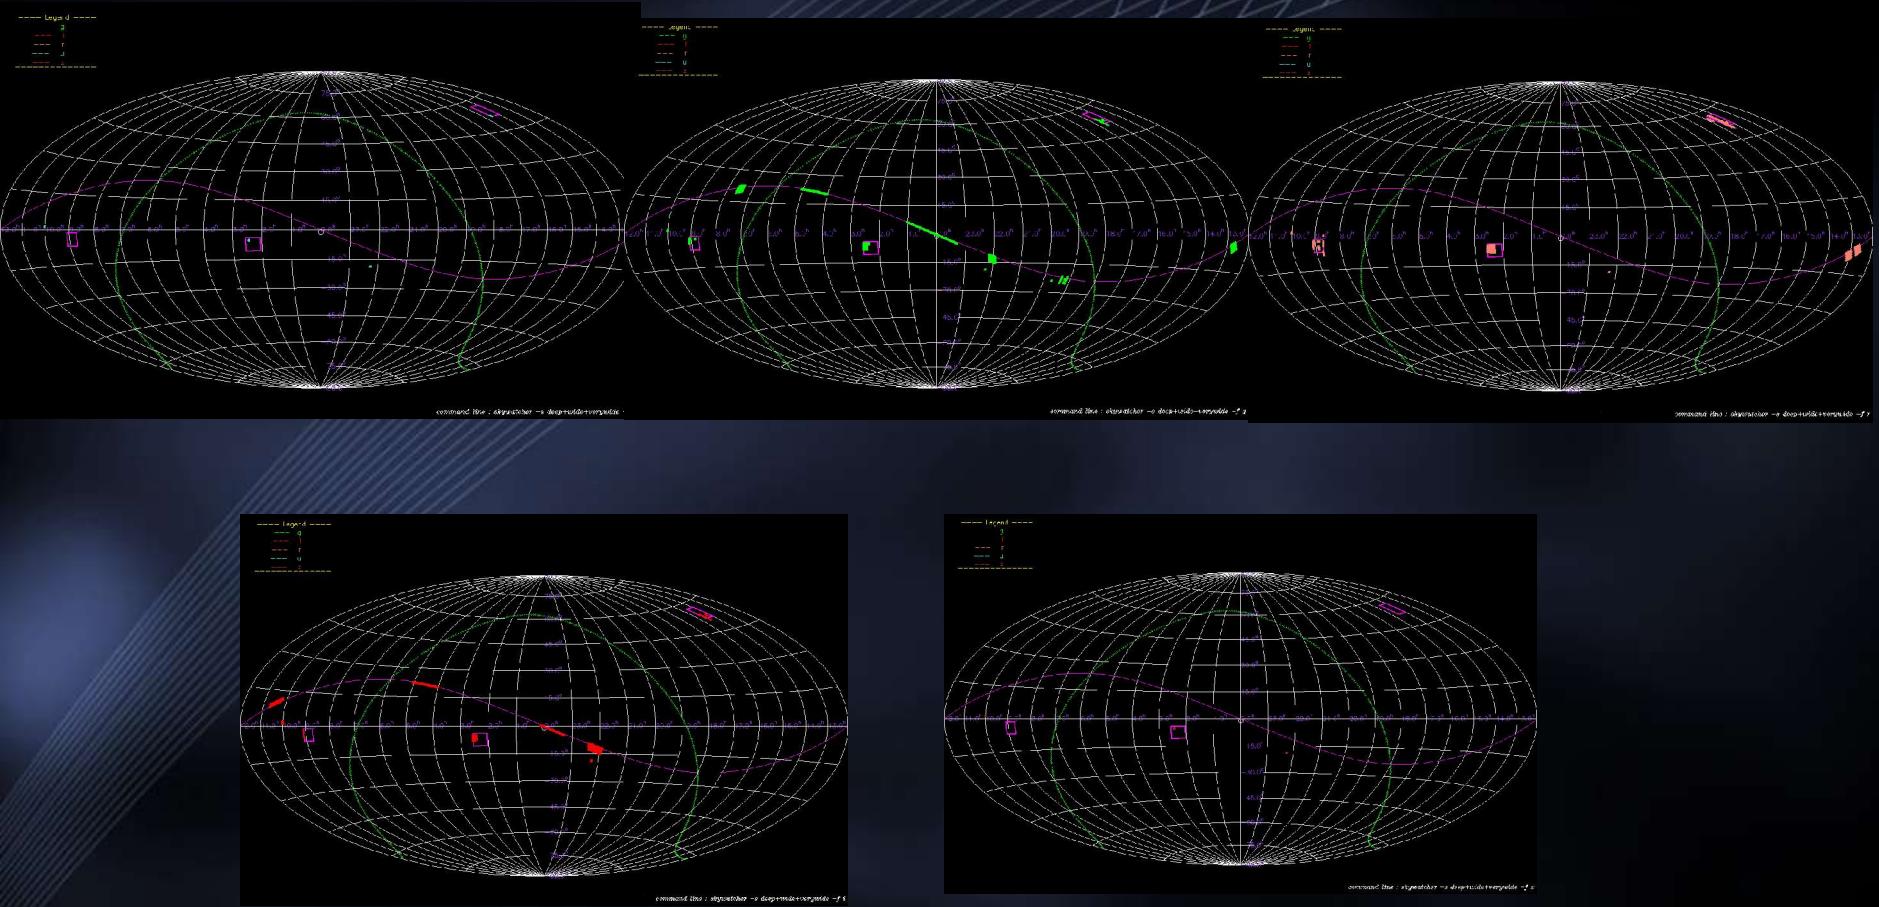

All images received

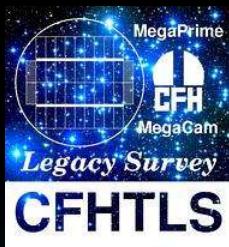

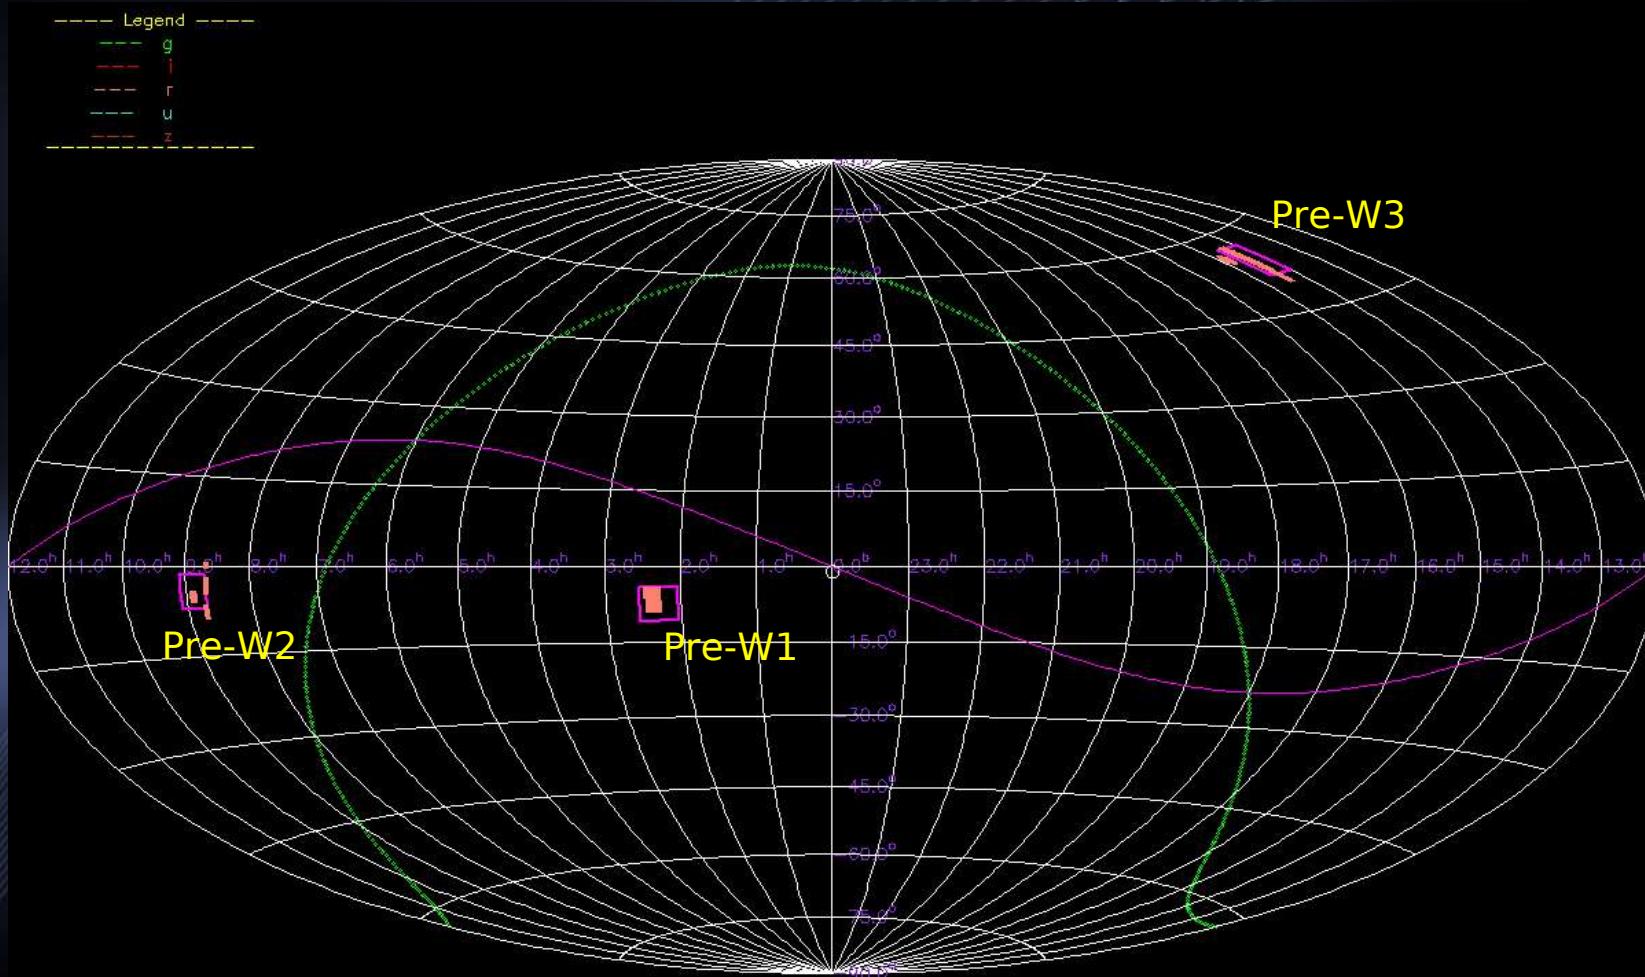

CFHTLS per filter : 03A/B deep, wide and very wide data dominated by g, r ,i data

Terapix/Skywatcher: views of all CFHTLS megacam images per filter

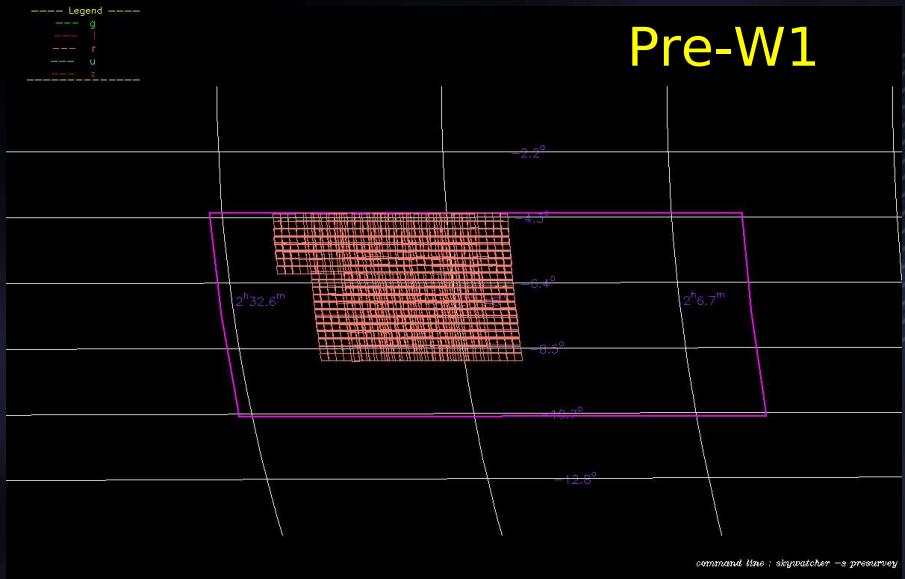

All pre-surveys 03A - 03B

command line : `skywatcher -s presurvey`

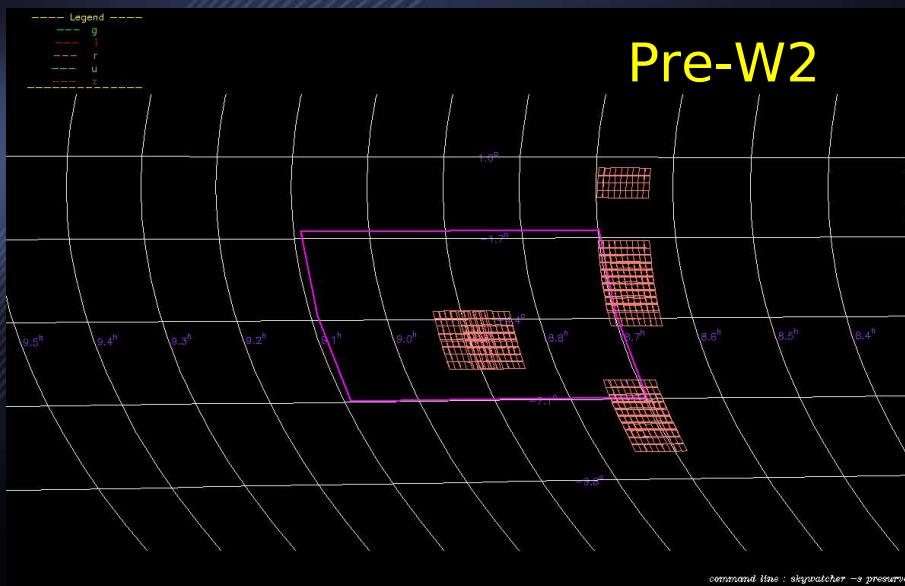

Pre-W1

Terapix/Skywatcher: view of all pre-W1 Megacam images

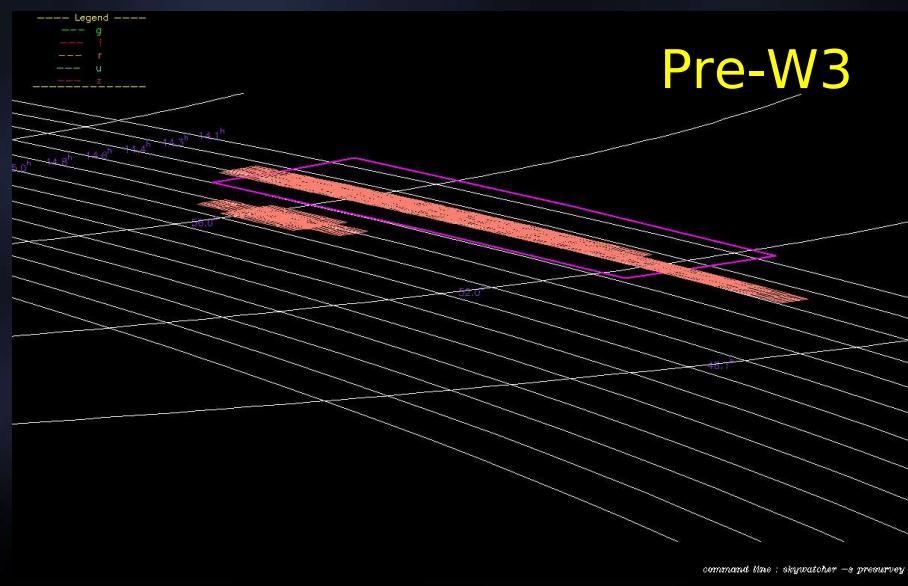

All pre-surveys

Pre-W2

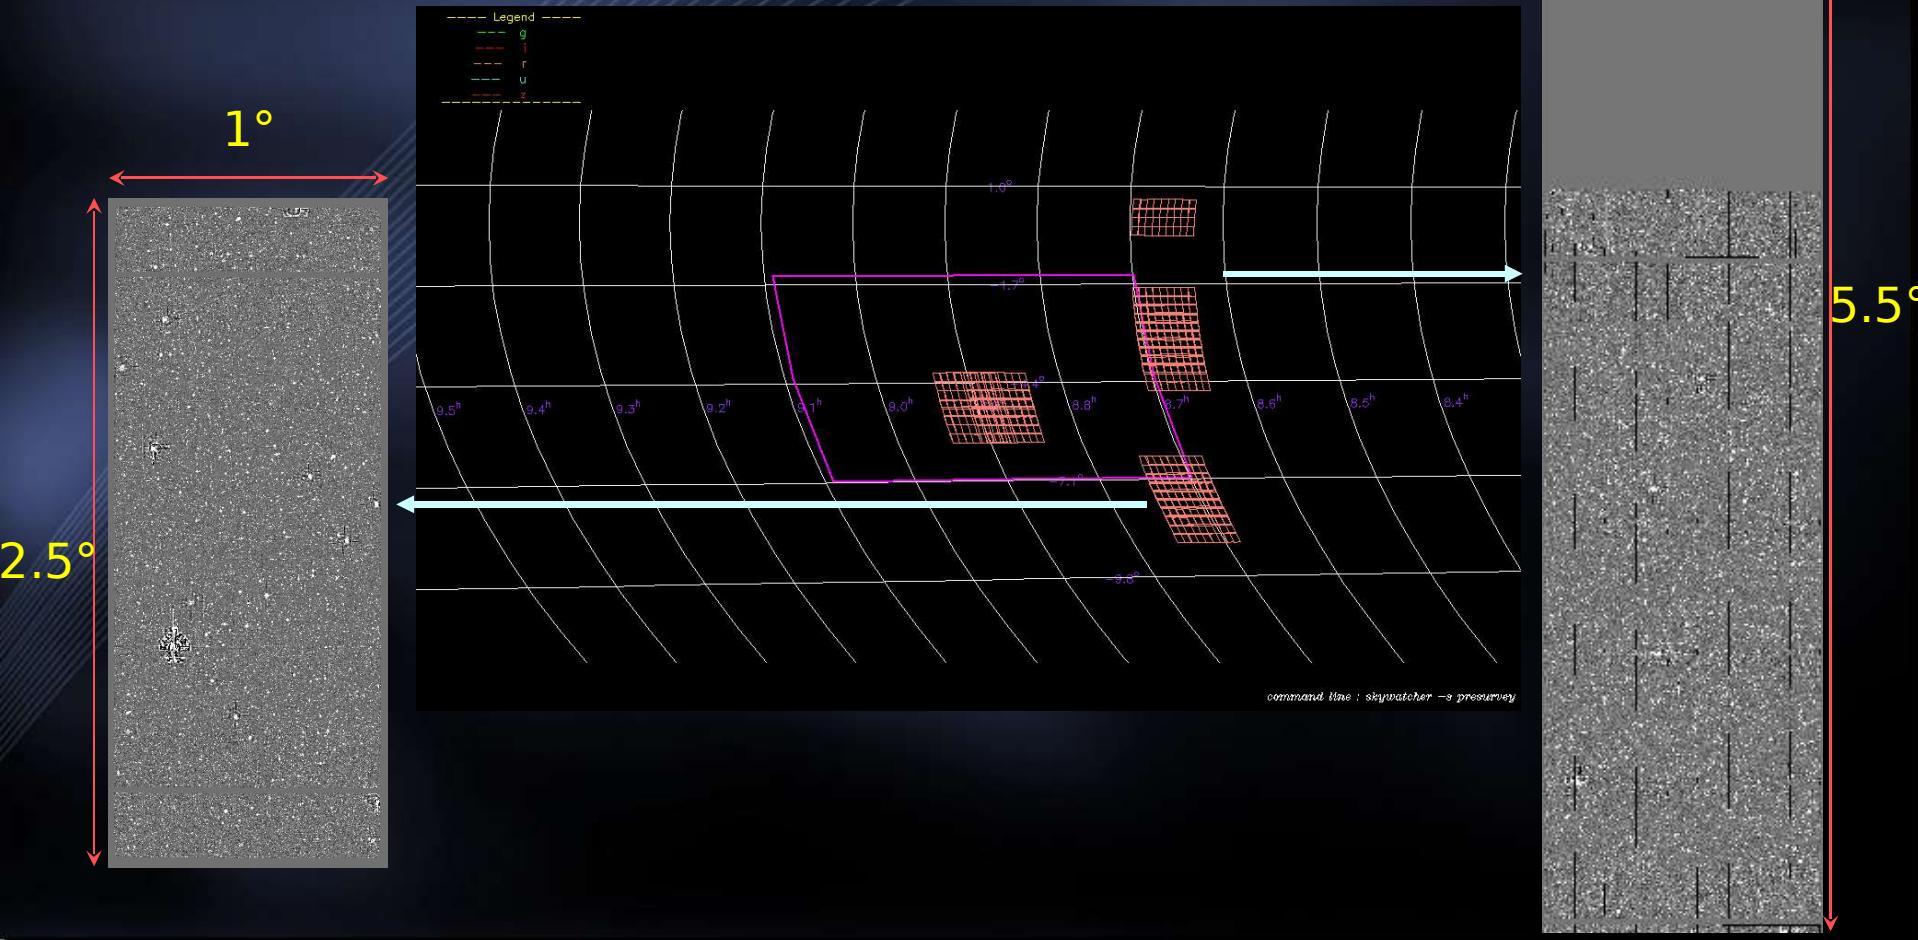

Terapix/Skywatcher: view of all pre-W2 Megacam images

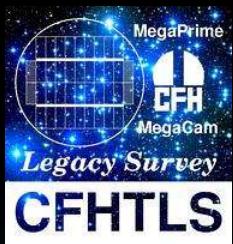

Pre-W3

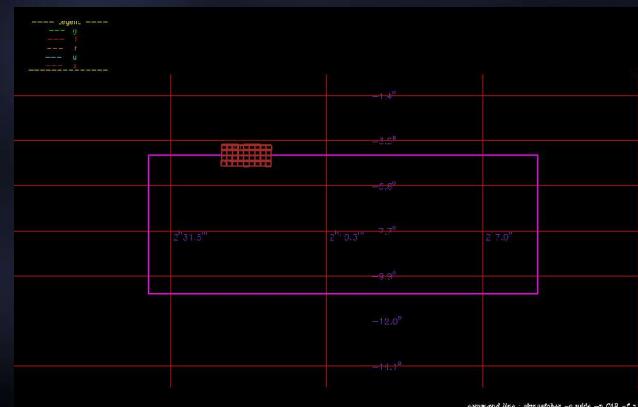

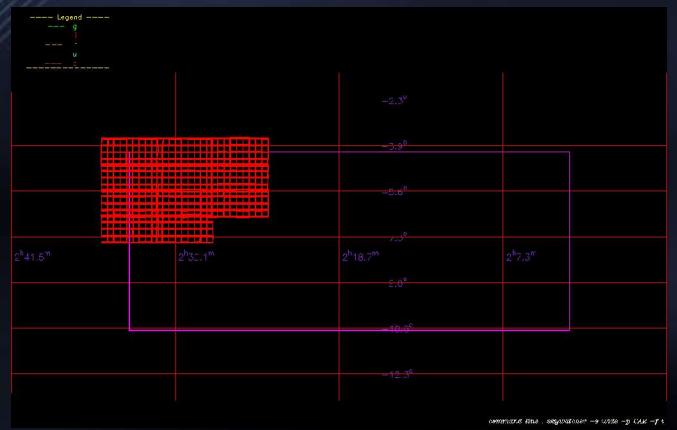

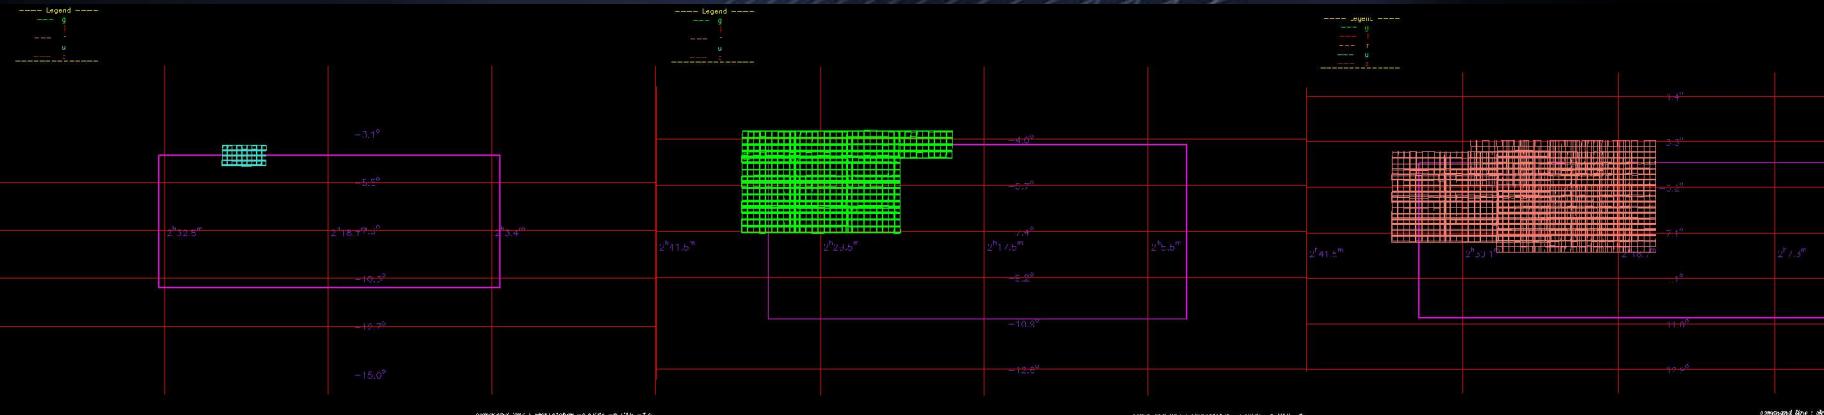

Terapix/Skywatcher: view of all pre-W3 Megacam images

Pre-survey W2

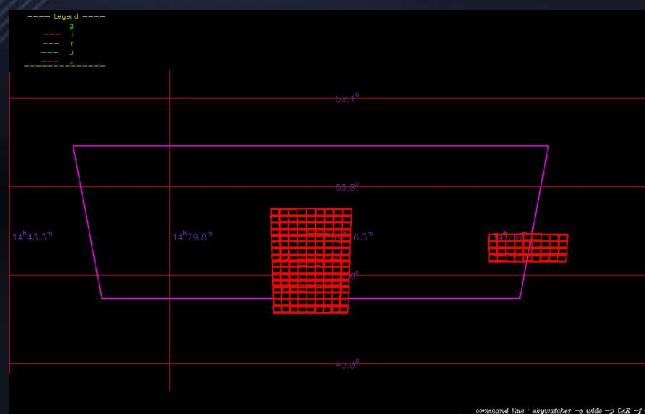

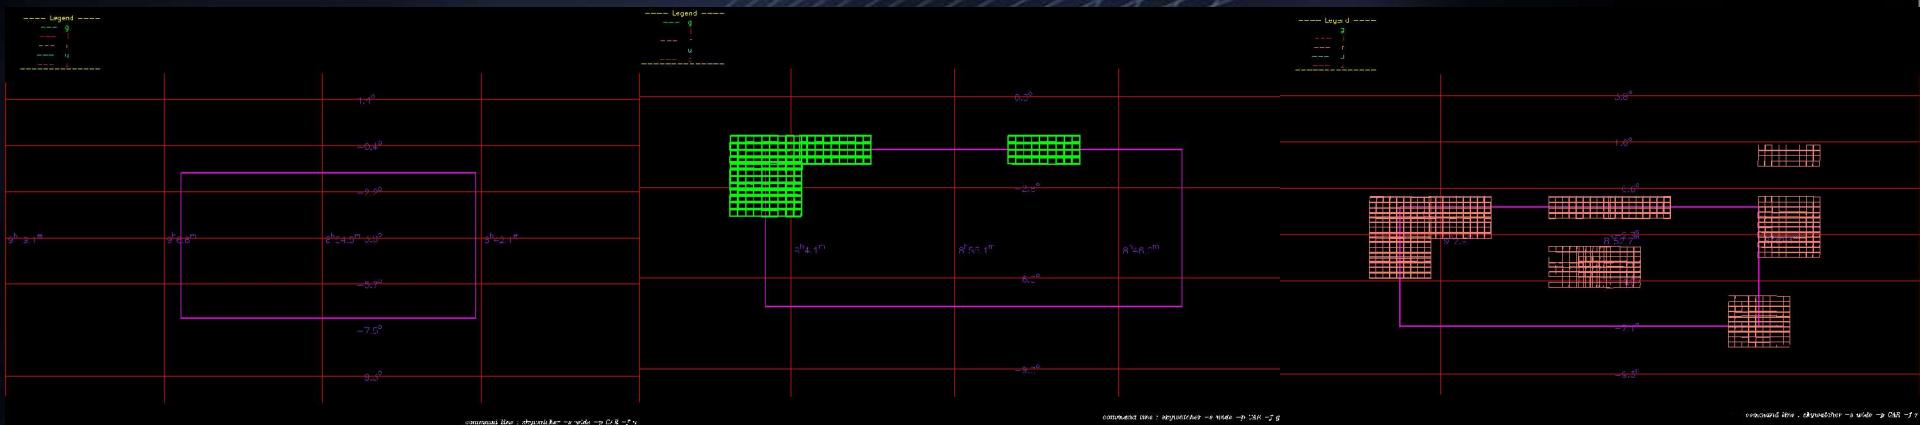

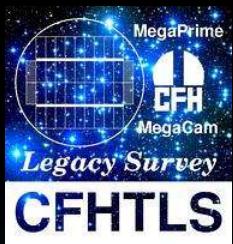

W1

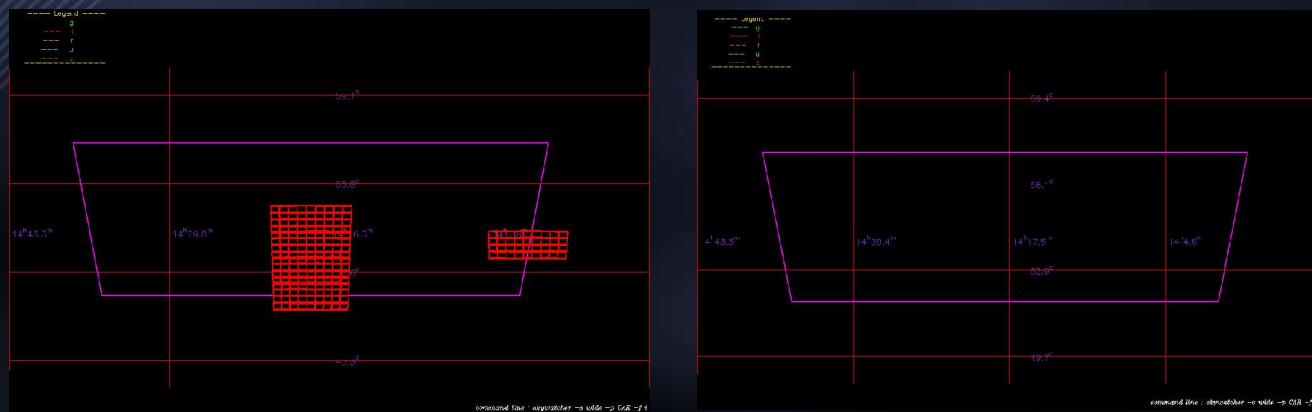

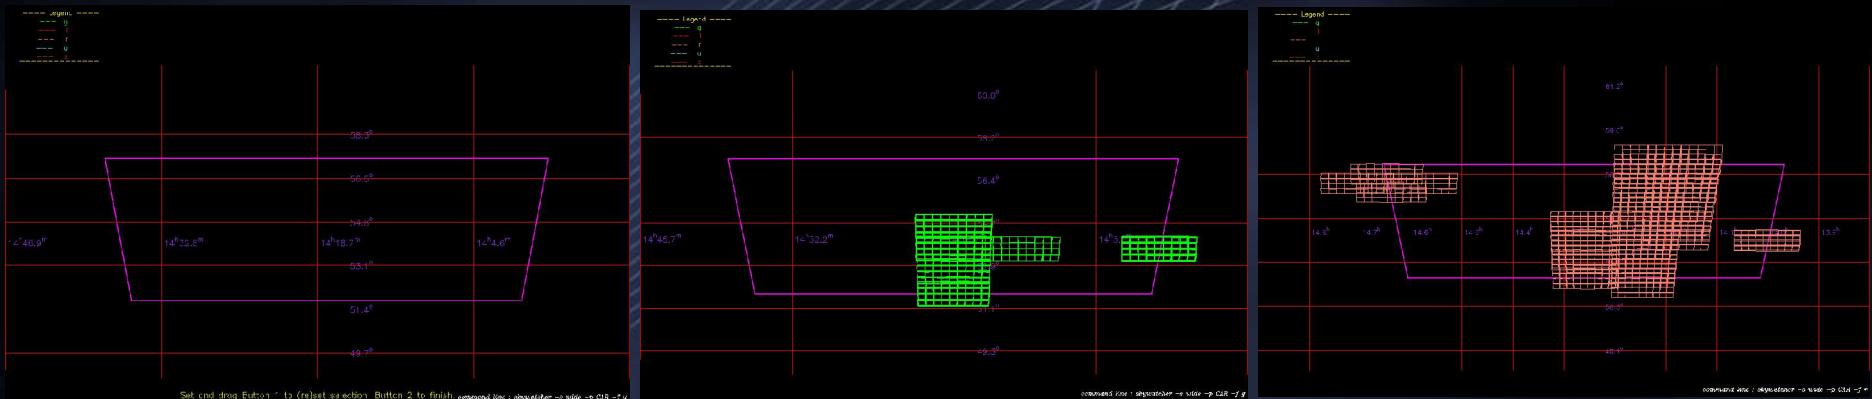

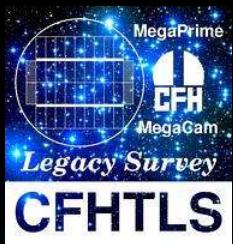

W2

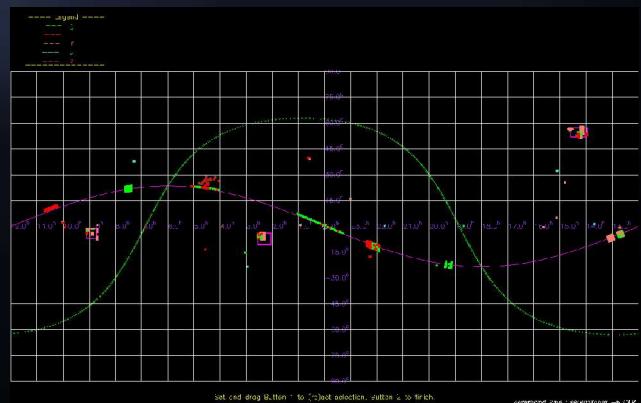

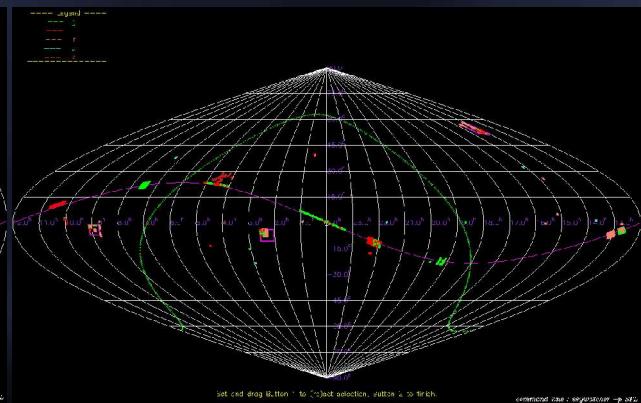

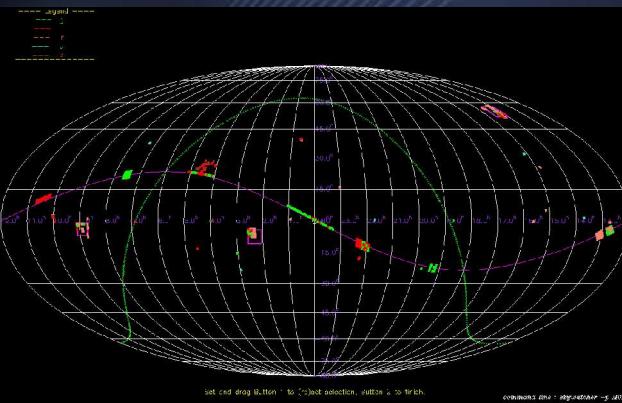

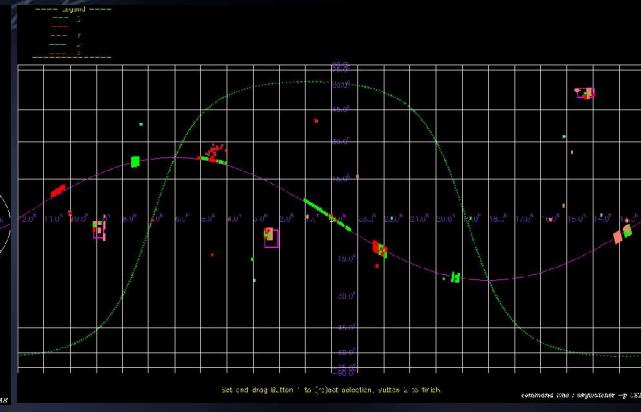

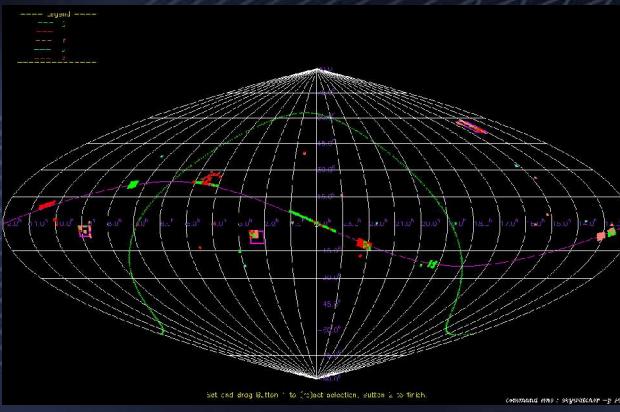

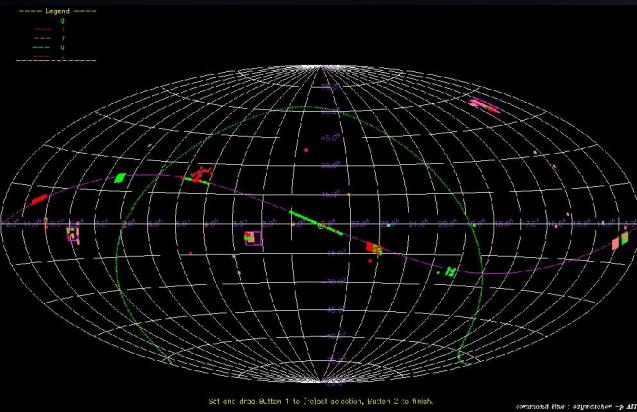

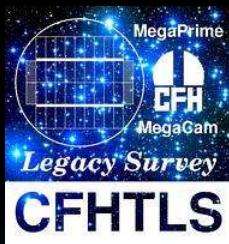

W3

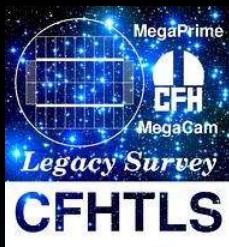

Projections available

Software specification

- Display FOV on celestial sphere
- Database filtering
- Different projections available
- Origin shifting, Zoom
- XML input
- Output format (X11 display, png)
- Library used : plplot, wcslib, htm
- GPL licence
- Portability on all Unix systems

Software development in progress

- Input XML file compatible VOTable
- Reading FITS files
- Linking to QualityFits pages
- Linking to catalogue sources
- Web Service
- Web GUI
- On line for MEGACAM and WIRCAM

First Release : End of July
